**standa**

- Extremely quiet fan <50 dBA
- Odorless plastic curtains
- HEPA air filter

**Laminar Flow Workstation 1CB** is designed to provide a clean environment in any laboratory or workshop. Our filtering unit **1CB** consists of a **HEPA air filter** and a **steel frame** complete with odorless plastic curtains. The vertical aligned flow of filtered air ensures that clean air flows uniformly over the workstation, keeping your samples, or optics in a clean managed environment.

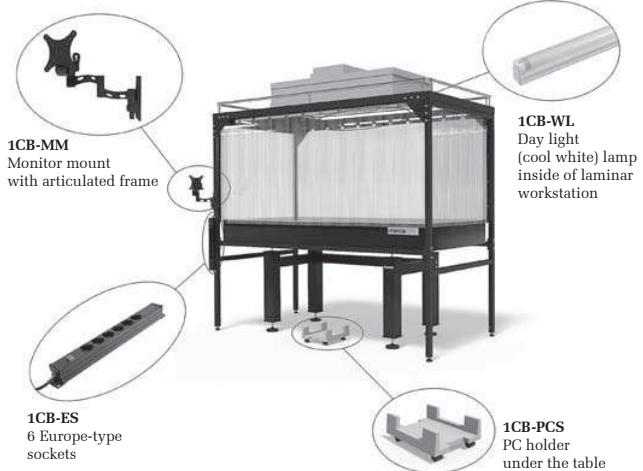

In a laser optics manufacturing, a laser repair or research environment, cleanliness of optical surfaces is imperative. The millions of particles present in most laboratories can fall onto optical surfaces, or they can be carried to optical surfaces by the energy in a laser beam. Once on the surface the lasing beam will burn the particles onto the coating, causing attenuation of the intra cavity energy. In addition the burnt particle will absorb more energy and cause localized heating on the surface of the optic. The localized heating can cause thermal lensing and damage to the optical coating. When adding the **1CB** to your optical table you remove the particles and therefore the potential damage to your optics.

## ORDERING INFORMATION

As an example model – **1CB-08-20-TS** combines the proven **1HT08-20-20** (800 × 2000 × 200 mm) honeycomb tabletop, the sturdy **1TS05-12-06-AR** table support and the NEW **1CT-08-20** air filter unit complete with curtains. For greater **stability** and **performance** we suggest ordering a **Vibration Isolation System 1VIS** (**1CB-08-20-VIS**) instead of static rigid supports **1TS**.

If you already have your optical table set up and wish to add the filtered air unit to your table, we can provide any custom size to suit your needs. Quantity of **HEPA filters** can be increased according to the customer's application dimensions.
